

JOHN UGHIOVHE

Backend Software Engineer

Lagos, Nigeria | Email: ughiovhejohn@gmail.com | GitHub: github.com/JohnUghiovhe

Portfolio: johnughiovhe.vercel.app | LinkedIn: linkedin.com/in/john-ughiovhe

PROFESSIONAL SUMMARY

Backend Software Engineer focused on building scalable APIs, reliable backend systems, and production-ready services using TypeScript, Node.js, NestJS, Express, PostgreSQL, Redis, Docker, and cloud platforms. Experienced in authentication, distributed job processing, workflow orchestration, and transactional systems, with a track record of shipping backend features in collaborative engineering teams. Passionate about designing maintainable systems, solving complex backend problems, and turning product requirements into reliable software.

SELECTED HIGHLIGHTS

- Top 140 Backend Finalist, HNG Internship 14, selected from 22,487 participants; built and shipped 20+ backend features across authentication, OAuth, workflow orchestration, notifications, profile management, and REST APIs.
- Architected Insighta Labs+ and a distributed Background Job Scheduler, demonstrating experience with multi-client backend architecture, Redis, DAG execution, retries, distributed locking, and observability.
- Led a 5-engineer backend team on Qpass, establishing architecture and API standards while building authentication, RBAC, ticketing, QR check-in, staff workflows, email services, and attendance management.
- Completed an AltSchool Africa Backend Engineering Diploma as Best Learner and graduated from TechCrush Cohort 7, progressing into Cloud Computing/DevOps to deepen expertise in infrastructure, deployment, and scalable systems.

PROFESSIONAL EXPERIENCE

Backend Software Engineer | SEIL | June 2026 – Present

- Designed and shipped 10+ production backend features including Google OAuth, Funnel Generation & Display APIs, notification services, profile management, and funnel stage progression.
- Improved maintainability by introducing database migrations, Swagger documentation, unit tests, and consistent API design patterns.
- Collaborate with cross-functional engineers to evolve SEIL beyond its internship MVP into a production-focused platform.

Backend Engineering Intern | HNG Tech | Apr 2026 – Jun 2026

- Selected into HNG Internship 14 Backend track and progressed to the Top 140 finalists from over 22,000 participants.
- Delivered production-ready backend functionality while working in an agile team using Git workflows, pull requests, and peer reviews.
- Transitioned into continued product development on SEIL after the internship.

Backend Software Engineer (Hackathon Team) | Distill AI | May 2026 – July 2026

- Engineered orchestration services for multi-stage AI document extraction with resumable processing.
- Built live processing trace streaming, intelligent request classification, explainable routing, and confidence-scoring services.
- Implemented configurable policy/pricing rules and platform infrastructure including authenticated configuration and tool registry foundations.

FLAGSHIP PROJECTS

Insighta Labs+

GitHub: <https://github.com/JohnUghiovhe/insighta-backend>

Architected a unified backend platform serving Web and CLI clients through shared authentication, authorization, and business logic.

- Implemented GitHub OAuth with PKCE, RBAC, deterministic search, caching, secure token lifecycle management, and rate limiting.
- Designed backend services as the single source of truth across multiple client interfaces.

Background Job Scheduler -

GitHub: <https://github.com/JohnUghiovhe/background-job-scheduler>

Designed a distributed scheduling system using Redis as the single source of truth.

- Implemented DAG execution, distributed locking, retries, dead-letter recovery, SSE observability, and independent API/Worker services.
- Architecture documentation and source code available on GitHub.

Qpass -

GitHub: <https://github.com/EventNester/QPass-Backend>

Led the backend engineering team in building a QR-powered event registration and attendance platform for event organizers.

- Designed and implemented authentication, RBAC, event/ticket management, QR-based check-in, staff workflows, email services, imports/exports, and attendance tracking.
- Established backend architecture, database design, API contracts, testing standards, and integration workflows across a 5-engineer team.
- Implemented transactional workflows and comprehensive validation/testing to ensure reliable ticket issuance, check-in integrity, and accurate attendance records.

TECHNICAL SKILLS

Backend: Node.js, NestJS, Express.

Languages: TypeScript, JavaScript, SQL.

Databases: PostgreSQL, Redis, MongoDB, SQLite.

Architecture: REST APIs, OAuth 2.0, RBAC, Distributed Systems, Workflow Orchestration, Background Jobs, SSE, Caching.

Cloud & DevOps: Docker, AWS, GitHub Actions, Linux.

Testing & Tooling: Prisma, TypeORM, Swagger/OpenAPI, Git, Vitest, Supertest.

EDUCATION

- Backend Engineering ____ TechCrush (2026)
- Diploma in Software Engineering ____ AltSchool Africa (2025–2026)
- B.Sc. Technical Education ____ Ambrose Alli University (2017)

AWARDS & CERTIFICATIONS

- HNG Internship 14 Backend Finalist ____ Top 140 of 22,487 participants
- Best Learner ____ AltSchool Africa Diploma in Backend Engineering
- Backend Engineering Certificate ____ TechCrush
- Project Management Professional (PSMI)
