

JOHN UGHIOVHE

Backend Software Engineer

Lagos, Nigeria | Email: ughiovhejohn@gmail.com | GitHub: github.com/JohnUghiovhe

Portfolio: johnughiovhe.vercel.app | LinkedIn: linkedin.com/in/john-ughiovhe

PROFESSIONAL SUMMARY

Backend Software Engineer focused on building reliable APIs, scalable backend services, and distributed systems with TypeScript, Node.js, NestJS, Express, PostgreSQL, Redis, Docker, and AWS. Experienced in authentication, workflow orchestration, background processing, transactional systems, and cloud deployment, with hands-on experience shipping software in collaborative engineering teams. Currently expanding into cloud infrastructure and production systems while developing deeper expertise in distributed systems and reliable backend architecture.

PROFESSIONAL EXPERIENCE

Backend Engineer, Young Accelerator Program | Peerless | Oct 2026 – Present

Backend Software Engineer | SEIL | June 2026 – Sept 2026

- Designed and shipped 10+ production backend features including Google OAuth, Funnel Generation & Display APIs, notification services, profile management, and funnel stage progression.
- Improved maintainability by introducing database migrations, Swagger documentation, unit tests, and consistent API design patterns.
- Collaborate with cross-functional engineers to evolve SEIL beyond its internship MVP into a production-focused platform.

Backend Engineering Intern | HNG Tech

Apr 2026 – Jun 2026

- Selected into HNG Internship 14 Backend track and progressed to the Top 140 finalists from over 22,000 participants.
- Delivered production-ready backend functionality while working in an agile team using Git workflows, pull requests, and peer reviews.
- Transitioned into continued product development on SEIL after the internship.

Backend Software Engineer (Hackathon Team) | Distill AI | May 2026 – June 2026

- Engineered orchestration services for multi-stage AI document extraction with resumable processing.
- Built live processing trace streaming, intelligent request classification, explainable routing, and confidence-scoring services.
- Implemented configurable policy/pricing rules and platform infrastructure including authenticated configuration and tool registry foundations.

SELECTED ENGINEERING PROJECTS

Insighta Labs+

GitHub: <https://github.com/JohnUghiovhe/insighta-backend>

Architected a unified backend platform serving Web and CLI clients through shared authentication, authorization, and business logic.

- Implemented GitHub OAuth with PKCE, RBAC, deterministic search, caching, secure token lifecycle management, and rate limiting.
- Designed backend services as the single source of truth across multiple client interfaces.

Background Job Scheduler -

GitHub: <https://github.com/JohnUghiovhe/background-job-scheduler>

Designed a distributed scheduling system using Redis as the single source of truth.

- Implemented DAG execution, distributed locking, retries, dead-letter recovery, SSE observability, and independent API/Worker services.
- Architecture documentation and source code available on GitHub.

Qpass -

GitHub: <https://github.com/EventNester/QPass-Backend>

Led the backend engineering team in building a QR-powered event registration and attendance platform for event organizers.

- Designed and implemented authentication, RBAC, event/ticket management, QR-based check-in, staff workflows, email services, imports/exports, and attendance tracking.
- Established backend architecture, database design, API contracts, testing standards, and integration workflows across a 5-engineer team.
- Implemented transactional workflows and comprehensive validation/testing to ensure reliable ticket issuance, check-in integrity, and accurate attendance records.

TECHNICAL SKILLS

Backend: Node.js, NestJS, Express, REST APIs, Swagger/OpenAPI.

Languages: TypeScript, JavaScript, SQL.

Data & Caching: PostgreSQL, Redis, MongoDB, SQLite.

Systems & Architecture: Distributed Systems, Background Jobs, Workflow Orchestration, DAGs, Caching, Distributed Locking, SSE.

Authentication & Security: JWT, OAuth 2.0, PKCE, RBAC.

Cloud & DevOps: AWS, Docker, Docker Compose, Kubernetes, GitHub Actions, Linux, CI/CD.

Testing & Tooling: Vitest, Jest, Supertest, Prisma, TypeORM, Git.

EDUCATION

- **Cloud Computing Cohort 8** — TechCrush | 2026.
- **Backend Engineering Cohort 7** — TechCrush | 2026.
- **Diploma in Backend Engineering** — AltSchool Africa | Mar 2025 – Feb 2026.
- **B.Sc. Technical Education** — Ambrose Alli University | 2013 – 2017

AWARDS & CERTIFICATIONS

- **HNG Internship 14 Backend Finalist** ____ Top 140 of 22,487 participants
- **Best Learner** ____ AltSchool Africa Diploma in Backend Engineering
- **Project Management Professional(PMP)** ____ Project and Safety Management Institute
